# Install System

Thanks for installing CMS Made Simple  
1.11.12 (Seymour Norte)

**!** Please read the [Installation Troubleshooting](#) page in the CMS Made Simple™ Official Documentation.

## ★ Checking permissions and PHP settings

System Information	
Server Software	Apache
Server API	cgi-fcgi
Server Operating System	Linux 3.2.61-grsec-modsign On x86_64

✓	A test passed
✗	A test failed
!	A setting is above the required value, but below the recommended value or... A capability that <i>may</i> be required for some optional functionality is unavailable
?	Info Installation Troubleshooting

Checking PHP time limit in second You have 30  
 (minimum 30, recommend 60 or greater)  
*Number of seconds a script is allowed to run. If this is reached, the script returns a fatal error.*

Checking max upload file size You have 6-M  
 (minimum 2M, recommend 10M or greater)

**One or more tests have resulted in a failure or warning. You can still install the system but some functions may not work correctly. Please try to correct the situation and click "Try Again", or click the "Continue" button if the tests are for "Recommended settings" only.**

Try Again

Continue

```
# php.ini file
```

```
upload_max_filesize = 10M  
post_max_size = 10M
```

```
# .htaccess file
```

```
php_value upload_max_filesize "20M"  
php_value max_execution_time "60"  
php_flag file_get_contents On
```

```
# .htaccess file with PHP running as an Apache module  
<IfModule mod_php5.c>
```

```
    php_flag file_get_contents On
```

```
</IfModule>
```

# Install System

# ★ Admin Account Information

Select the username, password and email address for your admin account. Please make sure you record this password somewhere.

Admin Account Information	
Username	<input type="text"/>
E-mail Address	<input type="text"/>
Salt Admin Passwords	<input checked="" type="checkbox"/> If you choose to enable password salts, there is absolutely no way to reset lost admin passwords, other than through the lost password functionality. It is critical that you associate an email address with each admin account
Password	<input type="password"/>
Password (again)	<input type="password"/>
E-Mail Account Information	<input type="checkbox"/> <b>Note:</b> This task uses the php's mail function. If you don't receive this email, it may be an indication that your server is not properly configured and that you should contact your host administrator.

Continue

## ★ Site Name

This is the name of your site. It will be used in various places of the default templates and can be used anywhere with the {sitename} tag.

## ★ Timezone

Please select the timezone for your installation. This timezone value will be used for entering times into the system and for date and time calculations.

CMSMS has attempted to choose an intelligent default for you based on your servers current location, however this may not be correct.

**Note:** This is a change in behavior from previous versions of CMSMS. Also, you may need to enable the `set_db_timezone` config value if your server is in a different timezone than your primary user base.

## ★ Database Information

Make sure you have created your database and granted full privileges to a user to use that database.

For MySQL, use the following:

Log in to mysql from a console and run the following commands:

1. create database cms; (use whatever name you want here but make sure to remember it, you'll need to enter it on this page)
2. grant all privileges on cms.\* to cms\_user@localhost identified by 'cms\_pass';

Please complete the following fields:

Database Type:	<input type="text" value="MySQLi (4.1+)"/>
Database host address	<input type="text" value="localhost"/>
Database name	<input type="text" value="cms"/>
Username	<input type="text"/>
Password	<input type="password"/>
Database port	<input type="text"/> If you don't know, leave this blank to use default settings.
Table prefix	<input type="text" value="cms_"/>
Create Tables (Warning: Deletes existing data)	<input checked="" type="checkbox"/> Normally this field should be checked at all times. Use caution when disabling this feature
Install sample content and templates	<input checked="" type="checkbox"/>

Creating event\_handlers table sequence... [done]  
Creating group\_perms table sequence... [done]  
Creating groups table sequence... [done]  
Creating htmlblobs table sequence... [done]  
Creating additional\_htmlblob\_users table sequence... [done]  
Creating permissions table sequence... [done]  
Creating templates table sequence... [done]  
Creating users table sequence... [done]  
Creating userplugins table sequence... [done]

 **Success!**

Now let's continue to setup your configuration file, we already have most of the stuff we need. Chances are you can leave all these values alone, so when you are ready, click Continue.

CMS Document root (as seen from the webserver)	<p>Detected: <code>http://www.domain.com/dir</code></p> <input type="text"/> Leave this blank to use the system default
Path to the Document root	<input type="text" value="/dir/webroot/dir"/>
Query string (leave this alone unless you have trouble, then edit config.php by hand)	<input type="text" value="page"/>
Default language for the frontend. This adjusts the locale used for various default date handling functions, etc.	<input type="text" value="---"/>

Continue

# Install System

Thanks for installing CMS Made Simple  
1.11.12 (Seymour Norte)

Updating hierarchy positions... [done]

Installing modules... [done]

Clearing site cache (if any)... [done]

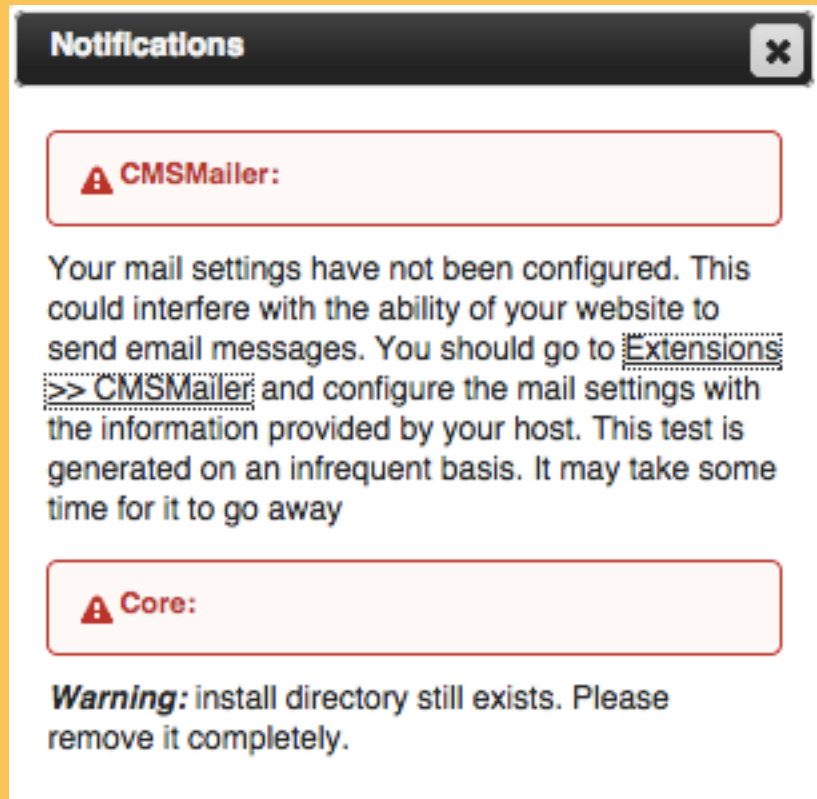

**Congratulations, you are all setup - here is your [CMS Site](#)**

[go to the Admin Panel](#)

The screenshot shows the Joomla! CMS user interface. At the top left is the logo "CMS Made simple™" with a palm tree icon. Below the logo, a dark grey bar displays "Welcome: talk\_user" next to a person icon. A second dark grey bar shows "You have 2 unhandled notifications" next to an envelope icon. A light grey bar below contains a home icon and the text "CMS" with a blue downward arrow. At the bottom, a white menu lists "Home", "View Site", and "Logout".

The screenshot shows a "Notifications" window with a black header and a close button (X) in the top right corner. The first notification is from "CMSMailer:" and contains the text: "Your mail settings have not been configured. This could interfere with the ability of your website to send email messages. You should go to [Extensions](#) >> [CMSMailer](#) and configure the mail settings with the information provided by your host. This test is generated on an infrequent basis. It may take some time for it to go away". The second notification is from "Core:" and contains the text: "**Warning:** install directory still exists. Please remove it completely."

**From address:**

beth@treelinedesign.com

Address used as the sender in all emails.

**Note**, this email address must be set correctly for your host or you will have difficulty sending emails. If you do not know the proper value for this setting, you may need to contact your host.

**From Username:**

CMS Made Simple Talk

Friendly name used for sending all emails

**CMSMailer Test**

**Test Email Address:**

Send Test Message

### Notifications ✕

**⚠ CMSMailer:**

Your mail settings have not been configured. This could interfere with the ability of your website to send email messages. You should go to [Extensions](#) >> [CMSMailer](#) and configure the mail settings with the information provided by your host. This test is generated on an infrequent basis. It may take some time for it to go away

**⚠ Core:**

**Warning:** install directory still exists. Please remove it completely.

**Content Type:**

Content

**\*Title:**

**\*Menu Text:**

**Parent:**

none

**Template:****Page Alias:**

The alias is used as an alternate to the page id to uniquely identify a page. It must be unique across all pages. The alias is also used to assist in building the URL for the page

**Page URL:**

Specify an alternate URL (relative to the root of your website) that can be used to uniquely identify this page. i.e: path/to/mypage. The page url is only useful when pretty urls are enabled.

**This page is searchable:**

This setting indicates whether the content of this page should be indexed by the Search module

**Active:****Show in Menu:****Use HTTPS for this page:****Cachable:**

Performance can be increased by setting as many pages as possible to cachable. However this cannot be used for pages where content may change on a per request basis

\*Content

Rich text editor toolbar containing icons for undo, bold, italic, underline, cut, copy, paste, text color, background color, bulleted list, numbered list, link, unlink, insert image, and a paragraph dropdown menu.

Large empty text area for content editing.
